

The `\glinlines` macro The `\glinlines{}` macro provides for an unlimited number of word-for-word interlinear text/gloss lines, and an unlimited number of free-form text lines for translations, notes, etc.

The macro can be used inside the linguistic example environment (`exe`) of the `gb4e` package, standing in place of the `\gl...` commands in some cases.

```
\begin{exe}
\ex
\gll Wenn jemand in die Wüste zieht ... \\\
If someone in the desert draws and lives ... \\\
\trans `if one retreats to the desert and ... '
\end{exe}
```

produces:

- (1) Wenn jemand in die Wüste zieht und ...
 If someone in the desert draws and lives ...
 ‘if one retreats to the desert and ... ’

The `\glinlines{}` equivalent is:

```
\begin{exe}
\ex
\glinlines{%
    Wenn jemand in die Wüste zieht und ...
*/    If someone in the desert draws and ...
\glt  `If one retreats to the desert and ... '
\end{exe}
```

and produces:

- (2) Wenn jemand in die Wüste zieht und ...
 If someone in the desert draws and ...
 ‘If one retreats to the desert and ... ’

The number of words in the text/gloss lines currently must be equal.

Lines are delineated with `*/` (arbitrarily chosen, can be set to some other string).

Words are split out by spaces. “they-have” is one word, “they have” is two words. Braces, which have a special meaning to \TeX , can be used to group words, in effect shielding everything they contain from being seen: “{they have}” counts as one word. Because braces are eventually stripped out before printing, their presence affects the working of any attach-commands that `\glinlines{}` might use.

Free-form text as a translation (or any other matter) is introduced with `\glt` (likewise arbitrary) as the default marker.

Multiple glosses are possible:

- (3) Auto uderzył dziecko.
 car.NOM hit.3SG child.ACC
 car.ACC hit.3SG child.NOM
 ‘The car hit the child.’ / ‘The child hit the car.’

Each text/gloss line (the word-for-word lines, WFW), can have one or more free-form text lines (FFT) attached.

The unstarred version of the macro, `\glinlines{}`, will print the FFT line(s) attached to the last WFW line. The starred version, `\glinlines*{}`, will print all FFT lines.

- (4) Auto uderzył dziecko.
 car.NOM hit.3SG child.ACC
 ‘The car hit the child.’
 car.ACC hit.3SG child.NOM
 ‘The child hit the car.’

The WFW lines can hold anything, not just glossing, as long as the number of words (i.e., ungrouped spaces) matches.

The FFT lines likewise can contain anything, not just translations.

- (5) gef hundinum matinn
 gje hunden maten
 give the dog the food
 gib dem Hunde das Essen
 One of the daily chores.

<https://tex.stackexchange.com/questions/156066/align-glosses-in-more-than-one-language-with-gb4e>

The `\glsetfirstlineformat{}` command will apply its contents to every word on the first line, e.g., font, font size, font colour.

To keep the spaces pristine as word-boundary markers, commands to be applied inside a line are marked with a colon (:) and suffixed to a word, e.g., `ugrt:writing` becomes `ugrt \writing`, which typesets as “ugrt ”.

- (6) 
 ugrt  q
 'Ugarītu  q
 Ugarit q

An ancient city in the east Mediterranean.
 Also known as Ras Shamra (“head fennel” = Cape Fennel),

رأس شجرة

New line Post-pend a plus sign (+) to the word prior to where the new line should occur, e.g., “Mink.+”:

- (7) `thu-mi-t-əm =k'wa Mink.`
`go.RIL.CTR.PASS =.QUOT Mink`
`chichiya7-u-s =k'wa Mink te= c'estaya.`
`grandmother.PST.3POSS =.QUOT Mink .DET= knothole`
 ‘Mink went towards it. The knothole was Mink’s grandmother.’

<https://tex.stackexchange.com/questions/115591/how-can-i-indent-the-second-line-of-a-linguistic-gloss-with-gb4e-sty/115607#115607>

Prepend commands To prepend a command to a word, mark the command’s finish with a semicolon (;), e.g., `:llapstar;`The` becomes `\llapstar`The` which becomes “*‘The”. (The `\llap{}` command is used here to overprint the * to the left, so that the text aligns vertically.)

- (9) *bites dog cat*
 verb dd cc
 ‘The dog bites the cat.’
 *‘The cat bites the dog.’

Source Reference

<https://tex.stackexchange.com/questions/306564/left-edge-vertical-alignment-in-gb4e>

Dot Prefix Words (i.e., made up of letters A-Z, a-z, and digits 0-9) beginning with a dot are treated as parts of speech and their formatting is governed by the `\mfssetposformat{}` command, e.g., with `\mfssetposformat{ \scshape \bfseries` “.1sg” becomes “.1sg”.

- (10) *kma t’əlčqu-(y)in*
 .1SG .1SG.SUB-see-**.2SG.OBJ**
 ‘I saw you.’ (S1:71)

Source Reference

<https://tex.stackexchange.com/questions/184860/gb4e-leave-s-extra-space-before-translation/184862#184862>

Patching the example number format

11. *Dies ist ein Beispiel*
 This is an example
 () \mapsto . : `\usepackage{gb4e} \usepackage{etoolbox} \makeatletter`
 `\patchcmd\exe {\theexnumi} {\theexnumi.} {} {} \makeatother`

Global settings The `\mfssetposformat{}` formatting continues to apply from one example to the next, like a global switch.

- (12) *Saja mem-bawa surat itu kepada Ali.*
 I **.CAUSE**-bring letter the to Ali.
 I brought the letter to Ali.

<https://tex.stackexchange.com/questions/308454/gb4e-overwrite-italics-in-first-line>

Adding information to the right is done with `\glinlinesnote{gloss example}{note}`.

```
\begin{exe}
\ex
  \glinlinesnote{%
    Das ist ein deutsches Beispiel.
  */ this is a German example
  }{German}
\end{exe}
```

produces

(15) *Das ist ein deutsches Beispiel.* (German)
 this is a German example

A longer sentence:

(16) *Das ist einer dieser sehr langen Sätze, die es in der a*
 this is one of-these very long sentences that it in the a
b deutschen Sprache gibt.
 b German language gives

(17) *Das ist einer dieser sehr langen Sätze,* (German)
 this is one of-these very long sentences
die es in der a b deutschen Sprache gibt.
 that it in the a b German language gives
 This item has a language note.

Source Reference

<https://tex.stackexchange.com/questions/600695/limiting-space-used-by-gb4e-and-adding-language-information-to-the-right>

Extended commentary The example can be almost all free-form text (i.e., `glt`-tagged material):

(18) *On the honeydew melon*¹

The **honeydew melon** is one of the two main cultivar types in *Cucumis melo* Inodorus Group. It is characterized by the smooth rind and lack of musky odor.

El **melón verde**, melón blanco, casaba, melón rocío de miel o melón tuna es un fruto de la familia del melón *Cucumis melo* (*Cucumis melo*) que se cultiva en general para el consumo gastronómico. La fruta es similar al melón anaranjado o cantalupo, pero tiene un sabor más dulce, contiene más agua y posee un color verde pálido o claro en su interior.

Le melon honeydew, ou melon miel, est un melon du groupe de cultivars de l'espèce *Cucumis melo* (famille des Cucurbitaceae). Le groupe Inodorus inclut le melon honeydew, le melon musqué, le melon d'hiver et d'autres hybrides du melon.

Il melone verde è un gruppo di colture appartenente al gruppo Inodorus della specie dei *Cucumis melo*.

Tale gruppo comprende oltre al melone verde anche il melone persiano, di inverno, casaba e crenshaw.

This example also illustrates the use of custom markdown commands and their attachment as postfixes, acting on the word they are attached to: `honeydew melon` becomes `honeydew:space;melon`, to be seen as one 'word', to which the `\ttikz` command (an overlaid green bounding box with red text) is applied as the pattern `word::command;` and the pattern is converted to `\command { word }` by a regular expression. The pattern `:command;` is converted to `\command`.

`honeydew::ttikz;` produces:

(19) *The **honeydew** melon*
.ART .PROD.MET.ATTR .FRUIT

(20) *Naoya-wa Mari-ga **Nani**-o Non-da ka Yumi-ni it-ta*
 Naoya-**TOP** Mari-**NOM** what-**ACC** drink-**PAST** Q Yumi-**DAT** it-**PAST**
no?
 Q?
 '(Lit.) For which x, x a thing, Naoya said to Yumi whether Mari drink x.'

¹Text from various Wikipedias.

Word-numbering can be switched on with `\mfsnumberedwordson`.

- (21) *Naoya-wa*¹ *Mari-ga*² *Nani*³ *Non-da*⁴ *ka*⁵ *Yumi-ni*⁶
 Naoya-**TOP**¹ Mari-**NOM**² what-**ACC**³ drink-**PAST**⁴ Q⁵ Yumi-**DAT**⁶
*it-ta*⁷ *no*⁸
 it-**PAST**⁷ Q⁸
 ‘(Lit.) For which x, x a thing, Naoya said to Yumi whether Mari drink x.’

Word-stacks, which are `vbox`es, can be formatted with `\mfsformattedvboxon`.

- (22)

<i>οὐ</i> ou not	<i>θέλω</i> thelō want. 1Sg	<i>δὲ</i> de but	<i>ὕμᾱς</i> humas you. ACC.PL	<i>ἀγνοεῖν</i> agnoein be-ignorant. PRES.INF	<i>ἀδελφοί</i> adelphoi brothers. VOC
<i>ὅτι</i> hoti that	<i>πολλάκις</i> polakis often	<i>προεθέμην</i> proethemēn planned. 1Sg	<i>έλθεῖν</i> elthein come. AOR.INF		

But I don’t want you to be unaware, brothers, that many times I planned to come.
 (Rom 1.13)

The default style is `\colorbox{blue!12}`. It can be changed by setting the `[wordstackstyle = ...,]` option, e.g., `[wordstackstyle = {\fcolorbox{blue}{red!12}}` produces:

- (23)

<i>οὐ</i> ou not	<i>θέλω</i> thelō want. 1Sg	<i>δὲ</i> de but	<i>ὕμᾱς</i> humas you. ACC.PL	<i>ἀγνοεῖν</i> agnoein be-ignorant. PRES.INF

`e::glsb!i;` $\mapsto e_i$

Single-item Sequence as Input Line An item that will be used multiple times can be stored once and retrieved multiple times.

(35) The cat sat on the mat.
The cat sat on the mat!
The cat sat on the mat?
The cat sat on the mat??

The command `\mfsloadaseql` takes four parameters: [namespace (optional)] { sequence name } { separator } { (multiline) data } so that `\mfsloadaseql{cat}{.}` { The cat sat on the mat. } loads `The cat sat on the mat.` And the command `\mfsuseaseql` { sequence name } { output delimiter } retrieves it.

```
\glinlines{%
    \mfsuseaseql{cat}{.}
*/    \mfsuseaseql{cat}{!}
*/    \mfsuseaseql{cat}{?}
*/    \mfsuseaseql{cat}{??}
}
```

Sequence item as Input Line Multiple items can be stored as records in a sequence and then retrieved from that sequence by record number. For examples, sentences in a narrative.

(36) Many Volcanoes Erupt Mulberry Jam Sandwiches.
The cat sat on the mat.
The quick brown fox jumps over.

Storing:

```
\mfsloadaseql{dog}{*/}{%  
The cat sat on the mat.  
*/ The quick brown fox jumps over.  
*/ Many Volcanoes Erupt Mulberry Jam Sandwiches.  
}
```

Retrieving:

```
\glinlines{%  
    \mfsuseaseqli{dog}{3}  
*/    \mfsuseaseqli{dog}{1}  
*/    \mfsuseaseqli{dog}{2}  
}
```

Using a lookup table A property list can store (case sensitive) **key** = **value** pairs as records, and **value** can be retrieved with **\mfsgetapropkv** {propertylist name} {key}.

Storing:

```
\mfsloadaprop{cat}{%  
The=1  
,cat=2  
,sat=3  
,on=4  
,the=5  
,mat=6  
,mat.=7  
}
```

Retrieving the value attached to key **the** = 5.

```
\mfsgetapropkv{cat}{the}
```

Auto-attaching a command to every word on a line The option [addca = pkvcat] will postfix the example custom command \pkvcat to every word on line a (the first line). The first three lines (a–c) have this built-in addc- ability.

(37) 1 2 3 4 5 7
1 2 3 4 5 6. pkvcat added manually (note the dot)
The cat sat on the mat. source text

Doing lookups

addca=
addcc=

(38)	G1722	G3588	G2094	G3588	G1208	G3588	G932	*
	εν	τω	έτει	τω	δευτέρω	της	βασιλείας	Ναβουχοδονόσορ
	in	the	year	the	second	of-the	reign	Nebuchadnezzar
	G1797	*			G1798	G2532	G1839	
	ενυπνιάσθη	Ναβουχοδονόσορ			ενύπνιον	και	εξέστη	
	dreamed	Nebuchadnezzar			a-dream	and	was-startled	
	G3588	G4151	G1473	G2532	G3588	G5258	G1473	G1096
	το	πνεύμα	αυτού	και	ο	ύπνος	αυτού	εγένετο
	the	spirit	his	and	the	sleep	his	went
	G575	G1473						
	απ’	αυτού						
	from	his						

The gloss contains the same Greek, three times.

The first line is doing a lookup of the strong property list which contains (unique) entries of the sort εν=G1722 , word to Strong Concordance number: [addca=pkvsstrong] , which uses \mfsgetapropkv.

The second line is the Greek text left as-is.

The third line is doing a lookup of the nabeng property list which contains (unique) entries of the sort εν=in , word to English translation: [addcc=pkvnabeng] , which uses \mfsgetapropkv.

General formatting is:

```
\glsetfirstlineformat{\footnotesize\ttfamily}
\glsetsecondlineformat{\selectlanguage{greek}\color{blue}{%}
\vrule height 12pt depth 6pt width 0pt}}
\glsetthirdlineformat{\small}
\mfsformattedvboxon
```

Attaching commands to specific words

```
addcb=  
addcaw=  
addccw=  
addcxa=
```

(39) (a) The **cat** sat on the mat.
 (b) 1 2 3 4 5 7
 (c) **The** cat sat on the **mat.**

The option `addcaw=2;doemph`, is applying the command `doemph` to word 2 of line (a).

The option `addcb=pkvc`, is applying the command `pkvc` to every word of line (b).

The option `addccw=6;doemph`, is applying the command `doemph` to word 6 of line (c).

The option `addcxa=3;1;doemph`, is applying the command `doemph` to word 1 of line (c).

The option `linenumsa=true`, displays the (first six) line numbers as lower case alphabetic.

An inline lookup “Cat” is word 2 in the lookup.

Done with:

```
`Cat' is word  
{\glinlines[addcaw=1;pkvc]{cat}}  
in the lookup.
```

Here is an example, Naoya-wa Mari-ga , of some inline glossing.
 Naoya-**TOP** Mari-**NOM**

Separator string The `\glinlines` assumes that the line separator markup is `*/`. The underlying macro `\glinlinesbase` takes the separator string as a parameter, so that

```
\glinlinesbase[gloss]{sep}{xx}{AtextxxBtext}
```

produces Atext . The `linesep` option passes the line separator through, Btext

so that

```
{\glinlines[linesep=yy]{CtextyyDtext} }
```

produces Ctext . Dtext

Attaching multiple commands to one word

addcxa=
addc[a]w=
addcxb=

(40) (a) *The* cat sat on the mat. e_i

`addcaw=1;textbf,` makes the first word (1) on the first line (a) bold (textbf). There are 3 line-based options like this: `addcaw`, `addcbw`, `addccw`, for the first, second and third lines respectively.

`addcxa=1;1;textit,` line;word;command format, makes the first word (1) on the first line (1) italic (textit). There are 6 options like this: `addcx[a-f]`. They can refer to any line, including the same one.

`addcxb=1;1;underWavy,` the first word of the first line is underlined with a wavy line.

`addcxc=1;7;textit,` makes the seventh word (7) on the first line (1) italic (textit).

(41) The cat sat on the mat. e_i

Highlighting a Wordstack A wordstack can be styled with `addwsa=`. For example, `addwsa=2;textredit`⁷ makes the second wordstack red italic.

addwsa=

(42) The *cat* sat on the mat.
The *cat* sat on the mat.
The *cat* sat on the mat.
The *cat* sat on the mat.

(43) (a) 我 没 有 问 题
(b) wǒ méi* yǒu* wèn tí
(c) I no have ask question
'I don't have questions.'
[Line (b) does a lookup of the xpinyin-database.def. * = first of multiple readings.]

Standalone commands

⁷Defined as `\newcommand\textredit[1]{\textcolor{red}{\textit{\textit{#1}}}}`.
